BEYOND CHATGPT

BUILD YOUR FIRST AI AGENT!

Today: understand AI, connect tools, and build a working admissions assistant.

LIVE HANDS-ON PROJECT

n8n + Gemini + Google Sheets

Today, you will BUILD — not just watch

Understand • Connect • Prove

Every participant should test a real AI Agent and verify a sample lead in Google Sheets.

The four AI concepts

AI analyses • GenAI creates • Agents act • Agentic AI adapts

The difference is not just generating answers — it is making decisions and using tools.

AI	GENERATIVE AI	AI AGENT	AGENTIC AI
ANALYSES	CREATES	ACTS	ADAPTS
Patterns + decisions	Text + images + code	Tools + actions	Plan + validate + retry

So… what is ChatGPT?

A product, not a single AI category

ChatGPT can generate content, analyse data and use tools when those capabilities are available.

Learn it. Build it. Test it.

Chatbot vs Automation vs AI Agent

Answers • Fixed steps • Tool decisions

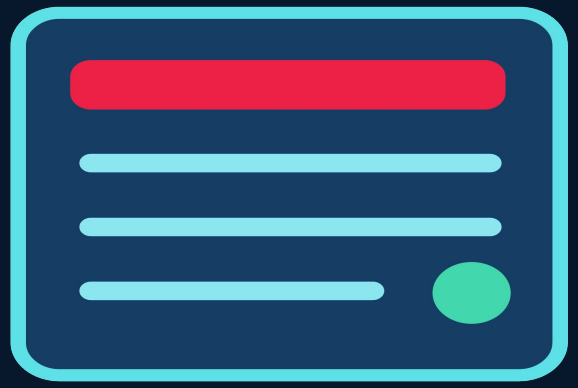

A true AI Agent can select tools based on a goal; a fixed workflow runs predefined steps.

A real business problem

A student asks about a course. What happens next?

We want accurate course information, a useful response and a recorded enquiry.

Capture the enquiry • Understand intent • Respond accurately

Our project: AI Admissions Assistant

Student enquiry → AI Agent → Tools → Response

Use fictional leads and approved course details. Do not invent fees or placements.

What will the finished agent look like?

A working chat with connected business tools

The agent decides whether to retrieve course information or record an enquiry.

Our toolkit

n8n + Gemini + Google Sheets

n8n orchestrates, Gemini interprets and reasons, Sheets stores approved sample leads.

n8n

GEMINI

GOOGLE SHEETS

Workshop roadmap — 4 hours

10:00 → 14:00

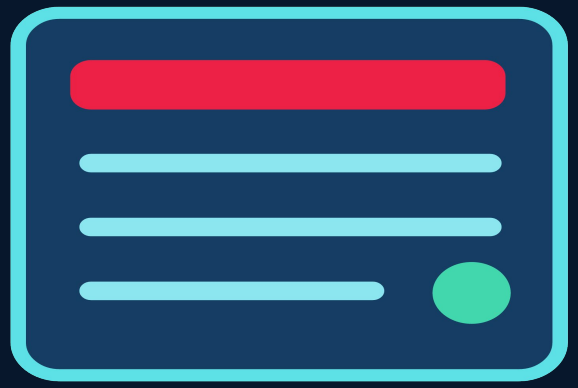

Understand • Demo • Build • Connect • Test • Showcase.

STEP 01 — Create your n8n workspace

Open n8n Cloud and create a workflow

Name it “My First AI Agent”. Keep credentials private.

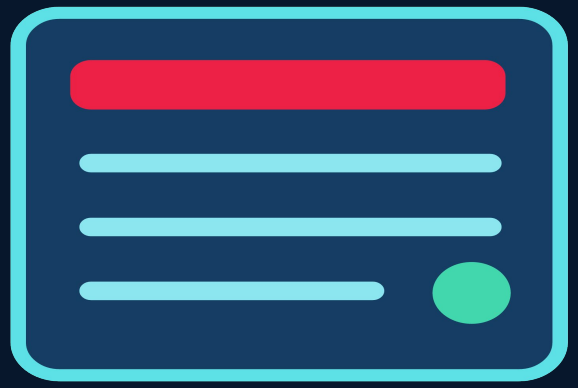

Create a new workflow in n8n Cloud

STEP 02 — Add the Chat Trigger

When chat message received

The trigger accepts a student message and starts the agent workflow.

Chat message starts the workflow

STEP 03 — Add the AI Agent node

Connect Chat Trigger → AI Agent

Use the AI Agent node, not only a basic LLM chain.

AI AGENT NODE

Connect Chat Model and callable Tools.

STEP 04 — Connect Google Gemini

AI Agent → Chat Model → Gemini

Create a Gemini API credential, choose an available model and test a simple reply.

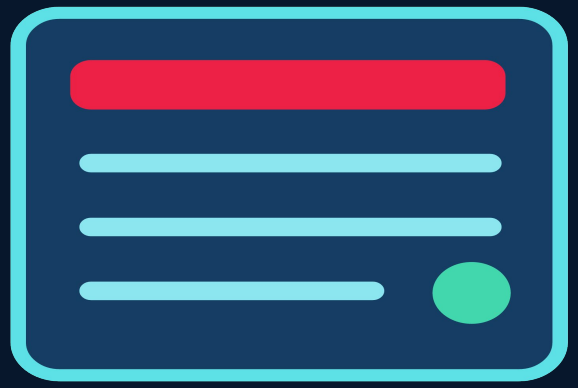

GOOGLE GEMINI

Connect a supported chat model and test.

STEP 05 — Give the agent clear instructions

Role + rules + approved information

Ask for missing details, avoid invented claims, and confirm before storing contact information.

SYSTEM PROMPT: role, boundaries, tool-use instructions

STEP 06 — Create the Course Info tool

get_course_info

Return approved sample details; the agent calls this when it needs course information.

Agent retrieves approved course details

STEP 07 — Create your demo Google Sheet

Name | Email | Course | Priority | Status

Use fictional names and emails; prepare column headers before connecting.

NAME	EMAIL	COURSE	PRIORITY	STATUS
Rahul	rahul@example.com	Python FS	High	New

STEP 08 — Connect Sheets as an AGENT TOOL

Google Sheets → Append Row

Connect to the AI Agent Tool port and configure mapped fields and confirmation.

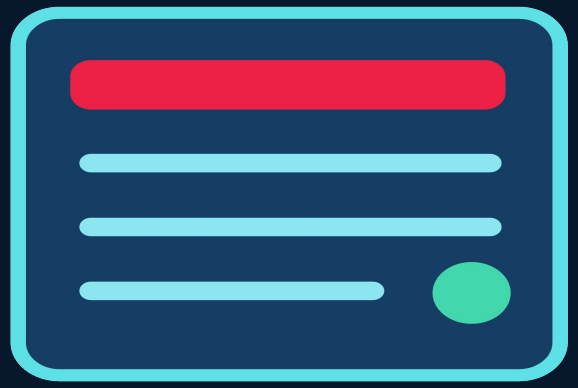

NAME	EMAIL	COURSE	PRIORITY	STATUS
Rahul	rahul@example.com	Python FS	High	New

STEP 09 — Test a real enquiry

“I am Rahul. Tell me about Python Full Stack.”

Ask for details, approve saving a fictional enquiry, then verify the sheet row.

Check agent reply and verify the saved sample row

Watch the agent choose a tool

Course question vs save request

Course question → information tool. Confirmed save request → Sheets tool.

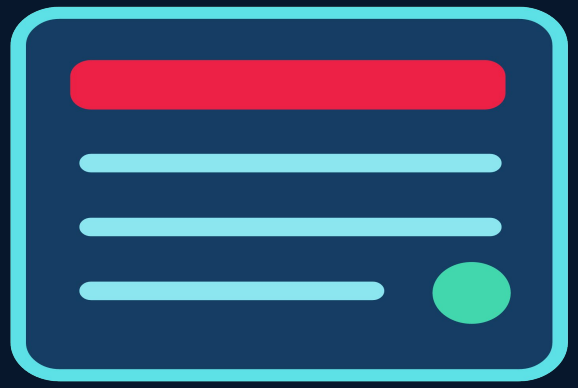

Troubleshooting

Diagnose, do not guess

Check Gemini quota, credentials, tool descriptions, mapping and Google permissions.

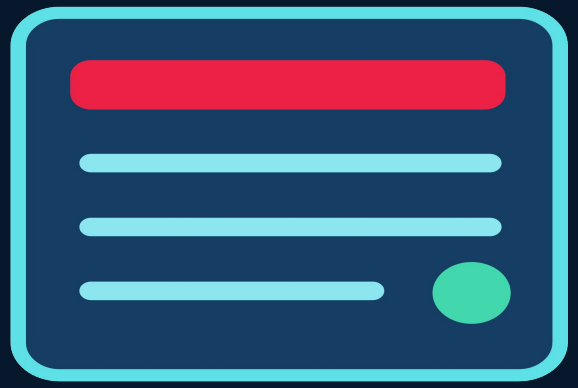

Credentials • Quota • Permissions • Tool schema

15-minute student challenge

Make your agent smarter

Beginner: second course • Intermediate: missing fields • Advanced: priority handling.

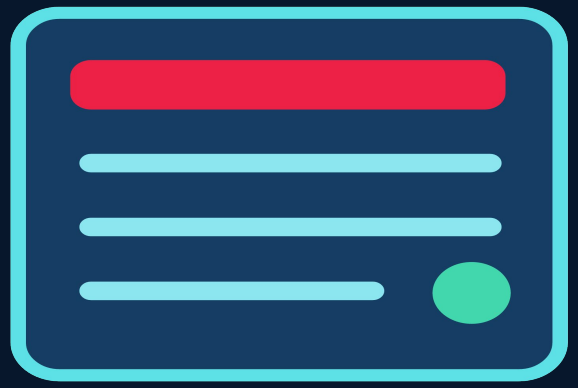

Try another enquiry. Add missing-field handling.

Student completion checklist

Show a working result

Chat works • Gemini responds • Agent calls tools • Sample row appears • JSON exported.

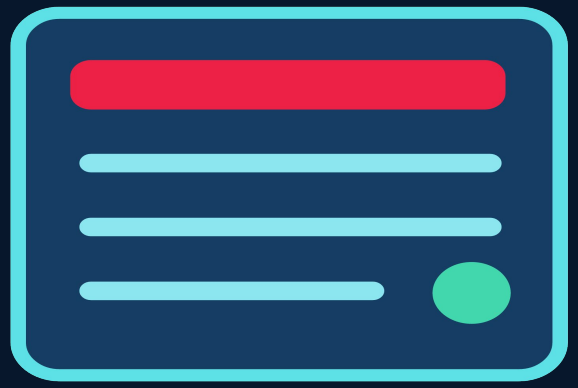

Chat → Agent → Tool call → Verified Sheet row

Share your work

Episode 01 GitHub repository

github.com/maddydevcg/opensaturday-episode-1-oct-31

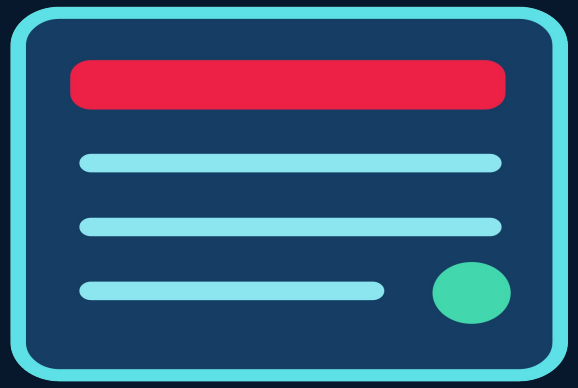

Starter files • Sample data • Workflow JSON

What comes after today?

Optional 5-day Agentic AI Bootcamp

Sales • Support • Recruitment • Documents • Capstone. Optional ₹499 programme.

Optional ₹499 follow-on programme

YOU BUILT AN AI AGENT.

Don’t Just Use AI. Build AI.

A goal, an AI model, callable tools and a verified result.

YOUR FIRST WORKING AGENT
